I am looking for a creative, remote-based position, to utilise my degree in graphic design. My background has a useful mixture of both B2C and B2B customer liaison, in a range of creative fields. During my career I have operated large and small format printers, vinyl cutters & CNC sheet material routers, of which all used unique programming packages which I learnt very quickly. I am open to learning new software for a role if required. I have a tremendous amount of hands on production experience in a variety of trades, which I feel has improved my ability to think dynamically when it comes to creative problem solving. This experience also proves useful when working with digital production files, as I have the understanding of using the files as the printer / machine operator.

FREELANCE CREATIVE 2015-PRESENT

This path has involved me fitting graphics inside RyanAir's fleet of Boeing passenger planes, to installing the renown Christmas window displays at Selfridges. I've managed graphics projects for brands such as LadBible, which involved leading a team of installers across Europe to brand their Summer event. I can be building websites for large international events one month, to organising graphics installations the next month. There has been a broad variety of projects over the years, of which have all entailed creative organisation, hard work and a motivated mindset.

PROJECT MANAGER, MJ EXHIBITIONS LTD 2017-2018

I looked after and liaised with the clients over the phone and via email, to clarify every detail of the brief is achieved flawlessly. I completed face to face handovers at the end of a job to ensure the client receives a complete service and positive experience. With tight deadlines there was no margin for delays, I was responsible for providing my team with the correct information in a timely manner, to maintain a smooth production process. I dealt with suppliers, negotiating costings and delivery times.

PRODUCTION ASSISTANT, ISLAND MARKETING LTD 2011-2015

This job involved a variety of experiences, from installing branding to vehicles to erecting exhibition stands at motor shows and other events for brands such as Audi, Porsche, H&R Owen & Samsung. Along with installations, I generate custom files for CNC routers and build 3D renders in SketchUp.
